

Are you at risk?

There are thousands of new threats everyday, making your network and your Internet experience a dangerous thing. Between hacking, phishing & ID theft, SPAM, virus/malware/trojans, poisoned websites, porn and other inappropriate content, the risks of being infected, taken advantage of, having your ID stolen or being exposed to things one regrets, one may wonder, "Am I safe?"

You can be. Allow us to assess your network, from your router & wireless to your desktop and wireless devices. Protect yourself, your employees, customers, and family by securing your network, filtering the Internet and tightening down your computers' security.

Network Security & Content Filtering

Security Benefits

- Cloud-based web content filtering and Internet security for blanket, affordable filtering.
- Protects by blocking malicious sites, botnet & malware, cache poisoning attacks, DoS (Denial of Service) and amplification attacks.
- Prevent ID theft through phishing protection.
- Help prevent ID theft from Packet Analyzing by securing you network.
- Protect yourself from Internet criminals using your Internet connection to commit crimes.
- Wireless:
 - Control access to your network.
 - Protect existing machines on the network from outside access.
 - Prevent unauthorized Internet usage by strangers.
- Internet Router/Gateway:
 - Prevent unauthorized changes.
 - Prevent remote Internet hacking of your network.

General Benefits

- Seamless integration into your network, whether business, school, home or church.
- Helps to ensure a safer Internet experience. Easily block unwanted content (adult material, gambling, etc.)
- Improves browsing speed (can improve speed by up to 20%.)
- Save your monthly Internet bandwidth by controlling file sharing (P2P & BitTorrent) and high bandwidth sites like YouTube.
- Filter according to categories, or specific sites.
- Filters wired and wireless devices (desktops, laptops, iPhones, etc.)
- View statistics of your network's Internet usage.

Business Benefits

- Unfiltered Internet access on customer wireless networks presents safety issues for them. Protect the user and other customers.
- Filter employee's Internet access, increasing productivity. Much of web traffic (as much as 30-40%) is non-work related, i.e. FaceBook or online gaming.
- Protect yourself from illegal activity and save yourself legal hassles. Help prevent awkward Not-Safe-For-Work (NSFW) situations.
